Lab Assignment 07

Inspiring Excellence

Course Code:	**CSE111**
Course Title:	**Programming Language II**
Topic:	**Inheritance and Overriding**
Number of Tasks:	**11**

[Submit all the Coding Tasks (Task 1 to 8) in the Google Form shared on buX before the next lab. Submit the Tracing Tasks (Task 9 to 11) handwritten to your Lab Instructors at the beginning of the lab]

[You are not allowed to change the driver codes of any of the tasks]

Task 1

Given the following classes, write the code for the **BBAStudent** class so that the following output is printed when we run the TestStudent class.

Driver Code and Parent Class	Output
`public class Student{` `  private String name = "Just a Student";` `  private String department = "nothing";` `  public void setDepartment(String dpt){` `  this.department = dpt;` `  }` `  public void setName(String name){` `  this.name = name;` `  }` `  public void details(){` `  System.out.println("Name : " + name + "` `Department: " + department);` `  }` `}` **`//Tester Class`** `public class TestStudent{` `  public static void main(String [] args){` `  BBAStudent b1 = new BBAStudent();` `  BBAStudent b2 = new BBAStudent("Humty Dumty");` `  BBAStudent b3 = new BBAStudent("Little Bo Peep");` `  b1.details();` `  System.out.println("1---------------");` `  b2.details();` `  System.out.println("2---------------");` `  b3.details();` `  }` `}`	`Name: Default Department: BBA` `1---------------` `Name: Humty Dumty Department: BBA` `2---------------` `Name: Little Bo Peep Department: BBA`

Task 2

Design the **CheckingAccount** class derived from the Account class with appropriate attributes and properties so that the driver code can generate the output given below.

Driver Code and Parent Class	Output
public class Account{ public double balance = 0.0; public Account(double balance){ this.balance = balance; } public double showBalance(){ return balance; } } **//Tester Class** public class TestAccount{ public static void main(String [] args){ System.out.println("Total Checking Accounts: "+CheckingAccount.count); CheckingAccount c1 = new CheckingAccount(); System.out.println("Account Balance: " + c1.showBalance()); CheckingAccount c2 = new CheckingAccount(100.0); System.out.println("Account Balance: " + c2.showBalance()); CheckingAccount c3 = new CheckingAccount(200.0); System.out.println("Account Balance: " + c3.showBalance()); System.out.println("Total Checking Accounts: "+CheckingAccount.count); } }	Total Checking Accounts: 0 Account Balance: 0.0 Account Balance: 100.0 Account Balance: 200.0 Total Checking Accounts: 3

Task 3

Design the **Dog** and **Cat** class derived from the Animal class with appropriate attributes and properties so that the driver code can generate the output given below.

Driver Code and Parent Class	Output
public class Animal { public String name; public int age; public String color; public Animal(String name, int age, String color) { this.name = name; this.age = age; this.color = color; } public void makeSound() { System.out.println("Animal makes a sound"); } public String info() { return "Name: "+name+"\nAge: "+age+"\nColor: "+color+"\n"; } } public class AnimalTester { public static void main(String[] args) { Dog dog = new Dog("Buddy", 5, "Brown", "Bulldog"); Cat cat = new Cat("Kitty", 3, "White", "Persian"); System.out.println("1.========"); System.out.println(dog.info()); System.out.println("2.========"); System.out.println(cat.info()); System.out.println("3.========"); dog.makeSound(); System.out.println("4.========"); cat.makeSound(); } }	1.======== Name: Buddy Age: 5 Color: Brown Breed: Bulldog 2.======== Name: Kitty Age: 3 Color: White Breed: Persian 3.======== Brown color Buddy is barking 4.======== White color Kitty is meowing

Task 4

Given the following classes, write the code for the **Vehicle2010** class to print the following output when we run the Vehicle2010User class.

Driver Code and Parent Class	Output
public class Vehicle{ public int x; public int y; public void moveUp(){ y = y+1; } public void moveDown(){ y = y-1; } public void moveLeft(){ x = x-1; } public void moveRight(){ x = x+1; } public String toString(){ return "("+ x + ","+ y + ")"; } } **//Tester Class** public class Vehicle2010User{ public static void main(String[] args){ Vehicle2010 car1 = new Vehicle2010(); System.out.println(car1); car1.moveLowerLeft(); System.out.println(car1); Vehicle2010 car2 = new Vehicle2010(); System.out.println(car2); car2.moveUpperRight(); System.out.println(car2); car2.moveLowerRight(); System.out.println(car2); } }	(0,0) (-1,-1) (0,0) (1,1) (2,0)

Task 5

Design the **ComplexNumber** class with the necessary property to produce the output from the given driver code.

Driver Code and Parent Class	Output
public class RealNumber { public double realValue; public RealNumber() { this(0.0); } public RealNumber(double realValue) { this.realValue = realValue; } public String toString(){ return "RealPart: " + realValue; } } public class ComplexNumberTester { public static void main(String[] args) { ComplexNumber cn1 = new ComplexNumber(); System.out.println(cn1); System.out.println("----------------"); ComplexNumber cn2 = new ComplexNumber(5.0, 7.0); System.out.println(cn2); } }	RealPart: 1.0 ImaginaryPart: 1.0 ---------- RealPart: 5.0 ImaginaryPart: 7.0

Task 6

Design the **Manager** and **Developer** class derived from the **Employee** class with appropriate attributes and properties so that the driver code can generate the output given below. [**Hint**:

Manager:

1. Adds a bonus to the base salary if the manager works more than 40 hours.
2. If the manager works more than 100 hours, the full amount is approved; if they work more than 80 hours, half the amount is approved. Otherwise, the increment is denied.

Developer:

1. Adds $700 to the base salary if the developer works with Java programming language.**]**

Driver Code and Parent Class	Output
public class Employee { public String name; private double baseSalary; private int hoursWorked; public Employee(String name, double baseSalary, int hoursWorked){ this.name = name; this.baseSalary = baseSalary; this.hoursWorked = hoursWorked; } public double getBaseSalary() { return baseSalary; } public void setBaseSalary(double baseSalary) { this.baseSalary = baseSalary; } public int getHoursWorked() { return hoursWorked; } public void setHoursWorked(int hoursWorked) { this.hoursWorked = hoursWorked; } public void displayInfo() { System.out.println("Name: " + name); System.out.println("Base Salary: $" + baseSalary); System.out.println("Work Hours: " + hoursWorked); } } public class EmployeeTester { public static void main(String[] args) { Manager neymar = new Manager("Neymar",1000, 45, 10); Developer messi = new Developer("Messi",1000,50,"Java"); Developer chiesa = new Developer("Chiesa", 1000, 50, "Javascript"); neymar.calculateSalary(); System.out.println("1.=========="); neymar.displayInfo(); System.out.println("2.=========="); neymar.requestIncrement(100); System.out.println("3.=========="); neymar.setHoursWorked(85); neymar.requestIncrement(100); System.out.println("4.=========="); neymar.calculateSalary(); System.out.println("5.=========="); neymar.displayInfo(); System.out.println("6.=========="); messi.calculateSalary(); System.out.println("7.=========="); messi.displayInfo(); System.out.println("8.==========");	1.========== Name: Neymar Base Salary: $1000.0 Work Hours: 45 Bonus: 10.0 % Final Salary: $1100.0 2.========== Increment denied. 3.========== $50 Increment approved. 4.========== 5.========== Name: Neymar Base Salary: $1050.0 Work Hours: 85 Bonus: 10.0 % Final Salary: $1155.0 6.========== 7.========== Name: Messi Base Salary: $1000.0 Work Hours: 50 Language: Java Final Salary: $1700.0 8.========== Name: Chiesa Base Salary: $1000.0 Work Hours: 50 Language: Javascript Final Salary: $1000.0

```
  chiesa.calculateSalary();
  System.out.println("7.==========");
  chiesa.displayInfo();
 }
}
```

Task 7

Design the **CinemexTicket** class derived from the MovieTicket Class so that the given output is produced:

- The seatTypes and seatPrices arrays contain the type of the seat and its corresponding price
- Night show charge (15% of ticket price) will be applicable if the time is between 6:00 PM - 11:00 PM
- Unique id for a ticket is generated by: MovieName-FirstLetterOfSeatType-TicketCount
- You may need to use .split() and Integer.parseInt() built-in methods

Driver Code and Parent Class	Output
public class MovieTicket { public static String [] seatTypes = {"Regular", "Premium", "IMAX 3D"}; public static double [] seatPrices = {300.0, 450.0, 600.0}; public static int nightShowCharge = 15; private String movie; public String showtime; public String date; private double price; public String seat; public MovieTicket(String movie, String date, String showtime, double price) { this.movie = movie; this.showtime = showtime; this.date = date; this.price = price; this.seat = "Not Selected"; } public void setPrice(double price) { this.price = price; } public double getPrice() { return price; } public String getMovie() { return movie; }	Total movie ticket(s): 1 1========== Ticket price is calculated successfully. 2========== Ticket ID: Deadpool and Wolverine-R-1 Movie: Deadpool and Wolverine Showtime: 18:30 Date: July 24, 2024 Genre: Action-Comedy Seat Type: Regular Price(tk): 345.0 Status: Not Paid 3========== Payment Successful. 4========== Ticket ID: Deadpool and Wolverine-R-1 Movie: Deadpool and Wolverine Showtime: 18:30 Date: July 24, 2024 Genre: Action-Comedy Seat Type: Regular Price(tk): 345.0 Status: Paid 5========== Total movie ticket(s): 2

```
    public String toString() {
        return "Movie: " + movie + "\nShowtime: " + showtime +
"\nDate: " + date;
    }
}

//Driver Code
public class Tester {
 public static void main(String[] args) {
   CinemexTicket ticket1 = new CinemexTicket("Deadpool and
Wolverine", "18:30", "Action-Comedy", "July 24, 2024");
   System.out.println("Total movie ticket(s): " +
CinemexTicket.getTotalTickets());
   System.out.println("1============================");
   ticket1.calculateTicketPrice();
   System.out.println("2============================");
   System.out.println(ticket1);
   System.out.println("3============================");
   System.out.println(ticket1.confirmPayment());
   System.out.println("4============================");
   System.out.println(ticket1);
   System.out.println("5============================");
   CinemexTicket ticket2 = new CinemexTicket("Twisters", "10:00",
"Sci-Fi", "August 10, 2024", "Premium");
  System.out.println("Total movie ticket(s): " +
CinemexTicket.getTotalTickets());
  System.out.println("6============================");
  ticket2.calculateTicketPrice();
  System.out.println("7============================");
  System.out.println(ticket2.confirmPayment());
  System.out.println("8============================");
  System.out.println(ticket2);
  System.out.println("9============================");
  System.out.println(ticket2.confirmPayment());
 }
}
```

```
6============================
Ticket price is calculated
successfully.
7============================
Payment Successful.
8============================
Ticket ID: Twisters-P-2
Movie: Twisters
Showtime: 10:00
Date: August 10, 2024
Genre: Sci-Fi
Seat Type: Premium
Price(tk): 450.0
Status: Paid
9============================
Ticket price is already paid!
```

Task 8

Design the **KKTea** (parent) and **KKFlavouredTea** (child) classes so that the following output is produced. **The KKFlavouredTea class should inherit KKTea and KKTea should inherit the Tea class.** Note that:

- An object of either class represents a single box of teabags.
- Each tea bag weighs 2 grams.
- The status of an object refers to whether it is sold or not

Driver Code and Parent Class	Output
public class Tea { public String name; public int price; public boolean status; public Tea(String name, int price) { this.name = name; this.price = price; this.status = false; } public void productDetail() { System.out.println("Name: " + name + ", Price: " + price); System.out.println("Status: " + status); } } //Driver Code public class TeaTester{ public static void main(String[] args) { KKTea t1 = new KKTea(250, 50); System.out.println("--------1---------"); t1.productDetail(); System.out.println("--------2---------"); KKTea.totalSales(); System.out.println("--------3---------"); KKTea t2 = new KKTea(470, 100); KKTea t3 = new KKTea(360, 75); KKTea.updateSoldStatusRegular(t1); KKTea.updateSoldStatusRegular(t2); System.out.println("--------4---------"); t2.productDetail(); System.out.println("--------5---------"); KKTea.totalSales(); System.out.println("--------6---------"); KKFlavouredTea t4 = new KKFlavouredTea("Jasmine", 260, 50); KKFlavouredTea t5 = new KKFlavouredTea("Honey Lemon", 270, 45); KKFlavouredTea t6 = new KKFlavouredTea("Honey Lemon", 270, 45); System.out.println("--------7---------");	--------1--------- Name: KK Regular Tea, Price: 250 Status: false Weight: 100, Tea Bags: 50 --------2--------- Total Sales: 0 KK Regular Tea: 0 --------3--------- --------4--------- Name: KK Regular Tea, Price: 470 Status: true Weight: 200, Tea Bags: 100 --------5--------- Total Sales: 2 KK Regular Tea: 2 --------6--------- --------7--------- Name: KK Jasmine Tea, Price: 260 Status: false Weight: 100, Tea Bags: 50 --------8--------- Name: KK Honey Lemon Tea, Price: 270 Status: false Weight: 90, Tea Bags: 45 --------9--------- --------10--------- Total Sales: 5 KK Regular Tea: 2 KK Flavoured Tea: 3

```
   t4.productDetail();
   System.out.println("--------8---------");
   t6.productDetail();
   System.out.println("--------9---------");
   KKFlavouredTea.updateSoldStatusFlavoured(t4);
   KKFlavouredTea.updateSoldStatusFlavoured(t5);
   KKFlavouredTea.updateSoldStatusFlavoured(t6);
   System.out.println("--------10---------");
   KKTea.totalSales();
 }
}
```

Task 9

```
1  public class A{
2    public int temp = 4;
3    public int sum = 1;
4    public int y = 2;
5    public A(){
6      y = temp - 2;
7      sum = temp + 3;
8      temp-=2;
9    }
10   public void methodA(int m, int n){
11     int x = 0;
12     y = y + m + (temp++);
13     x = x + 2 +  n;
14     sum = sum + x + y;
15     System.out.println(x + " " + y+ " " + sum);
16   }
17 }
18 public class B extends A {
19   public int x;
20   public B(){
21     y = temp + 3 ;
22     sum = 3 + temp + 2;
23     temp-=1;
24   }
25   public B(B b){
26     sum = b.sum;
27     x = b.x;
28   }

30    int  y =0;
31    y = y + this.y;
32    x = this.y + 2 + temp;
33    methodA(x, y);
34    sum = x + y + super.sum;
35    System.out.println(x + " " + y+ " " + sum);
36   }
37 }
```

```
A a1 = new A();
B b1 = new B();
B b2 = new B(b1);
a1.methodA(1, 1);
b1.methodA(1, 2);
b2.methodB(3, 2);
```

x	y	sum

Task 10

```
1  public class A{
2    public static int temp = 10;
3    public int sum = 1;
4    public int y = 2, x = 11;
5    public A(){
6      y = temp - 2;
7      sum = temp + 3;
8      temp-=2;
9    }
10   public void methodA(int m, int n){
11     int x = 0;
12     y = y + m + (this.temp++);
13     x = x + 2 +  n;
14     sum = sum + x + y;
15     System.out.println(x + " " + y+ " " + sum);
16   }
17  }
18 public class B extends A{
19   public static int x = 7;
20   public B(){
21     temp = temp + 3 ;
22     sum = 3 + temp + 2 + sum;
23     super.temp-=1;
24   }
25   public B(B b){
26     sum = b.sum;
27     x = b.x;
28   }
29   public void methodB(int m, int n){
30    int  y =0;
31    y = y + this.y;
32    x = this.y + 2 + temp;
33    methodA(x, y);
34    sum = x + y + super.sum;
35    System.out.println(x + " " + y+ " " + sum);
36   }
37 }
```

```
A a1 = new A();
B b1 = new B();
B b2 = new B(b1);
a1.methodA(1, 1);
b1.methodA(1, 2);
b2.methodB(3, 2);
```

x	y	sum

Task 11

```
1  public class A{
2      public static int temp = 3;
3      public int sum;
4      public int y;
5      public A(){
6          y = temp - 1;
7          sum = temp + 2;
8          temp-=2;
9      }
10     public void methodA(int m, int [] n){
11         int x = 0;
12         y = y + m + (temp++);
13         x = x + 2 +  (++n[0]);
14         sum = sum + x + y;
15         n[0] = sum + 2;
16         System.out.println(x + " " + y+ " " + sum);
17     }
18 }
19 class B extends A {
20     public static int x = 1;
21     public B(){
22         y = temp + 1 ;
23         x = 3 + temp + x;
24         temp-=2;
25     }
26     public B(B b){
27         sum = b.sum + super.sum;
28         x = b.x + x;
29     }
30     public void methodB(int m, int n){
31        int [] y = {0};
32         super.y = y[0] + this.y + m;
33         x = super.y + 2 + temp - n;
34         methodA(x, y);
35         sum = x + y[0] + super.sum;
36         System.out.println(x + " " + y[0]+ " " + sum);
37     }
38 }
```

`int x[] = {23};` `A a1 = new A();` `B b1 = new B();` `B b2 = new B(b1);` `a1.methodA(1, x);` `b2.methodB(3, 2);` `a1.methodA(1, x);`			

Ungraded Tasks (Optional)

(You don't have to submit the ungraded tasks)

Task 1

Design the class **Dog** so that the desired outputs are generated properly.

Driver Code and Parent Class	Expected Output
public class AnimalTester{ public static void main(String args[]){ Animal a1 = new Animal(); System.out.println("1-------------"); a1.details(); System.out.println("2-------------"); Dog d1 = new Dog(); d1.name = "Pammy"; System.out.println("3-------------"); System.out.println("Name: " + d1.getName()); d1.details(); System.out.println("4-------------"); d1.updateSound("Bark"); System.out.println("5-------------"); d1.details(); } } public class Animal{ public int legs = 4; public String sound = "Not defined"; public void details(){ System.out.println("Legs: "+legs); System.out.println("Sound: "+sound); } }	1------------- Legs: 4 Sound: Not defined 2------------- The dog says hello! 3------------- Name: Pammy Legs: 4 Sound: Not defined 4------------- 5------------- Legs: 4 Sound: Bark

Task 2

Design the **ScienceExam** class with the necessary property to produce the output from the given driver code.

Driver Code	Output
public class Exam { public int marks; public int time; public Exam(int marks) {	Marks: 100 Time: 90 minutes Number of Parts: 4 --------- Maths, English, Physics, HigherMaths Part 1 - Maths Part 2 - English

```
        this.marks = marks;
        this.time = 60;
    }
    public String examSyllabus() {
        return "Maths, English";
    }
    public String examParts() {
        return "Part 1 - Maths\nPart 2 -
English\n";
    }
}

//Tester Class
public class ExamTester {
 public static void main(String[] args) {
    ScienceExam ex1 = new ScienceExam(100, 90,
"Physics", "HigherMaths");
    System.out.println(ex1);
    System.out.println("----------------------");
    System.out.println(ex1.examSyllabus());
    System.out.println(ex1.examParts());
    System.out.println("======================");
    ScienceExam ex2 = new ScienceExam(100, 120,
"Physics", "HigherMaths", "Drawing");
    System.out.println(ex2);
    System.out.println("----------------------");
    System.out.println(ex2.examSyllabus());
    System.out.println(ex2.examParts());
  }
}
```

```
Part 3 - Physics
Part 4 - HigherMaths

======================
Marks: 100 Time: 120 minutes Number of Parts: 5
----------------------
Maths, English, Physics, HigherMaths, Drawing
Part 1 - Maths
Part 2 - English
Part 3 - Physics
Part 4 - HigherMaths
Part 5 - Drawing
```

Task 3

```
1   public class A {
2         public static int temp = 4;
3         public static int x = -10;
4         public int sum = 0;
5         public int y = 0;
7         public A() {
8             y = temp - 2;
9             sum = temp + 1;
10            temp -= 2;
11        }
13        public void methodA(int m, int n) {
14            int x = 0;
15            y = y + m + (temp++);
16            x = x + 1 + n;
17            sum = sum + x + y;
18            System.out.println(x + " " + y + " " + sum);
19        }
```

```
20  }
22  public class B extends A {
23        public static int x = 0;
24        public int sum = -6;
25        public B() {
26            super();
27            sum = 0;
28            y = temp + 3;
29            super.sum = 3 + temp + 2;
30            temp -= 2;
31        }
33        public B(B b) {
34            super();
35            if (b == null) {
36               y = temp + 3;
37               sum = 3 + temp + 2;
38               temp -= 2;
39            } else {
40                sum = b.sum + super.sum;
41                x = b.x;
42                b.methodB(2, 3);
43        }
44  }
46        public void methodB(int m, int n) {
45            int y = 0;
46            y = y + this.y;
47            x = y + 2 + (++temp);
48            methodA(x, y);
49            sum = x + y + sum;
50            System.out.println(x + " " + y + " " + sum);
51        }
52  }
```

Write the output of the following code:

```
public class Tester {
    public static void main(String[] args) {
        A a1 = new A();
        B b1 = new B();
        B b2 = new B(b1);
        b1.methodA(2, 3);
        b2.methodB(3, 8);
    }
```

Output:		
x	y	sum

}
